

## SECTION D: BOWLS

As a rule, a bowl has a rim diameter measurement greater than its height. They are frequently similar to categories of cups and jars, but are to be differentiated from cups by their larger size and from jars by their rim/height ratio. This is usually self-evident. The plain or cordoned lid-seated bowls, D3-3 and D3-4, are sometimes closed rather than open forms, but are included here arbitrarily as distinctive types: bowls are quite often of unusual forms, and none are as common as cup or jar types.

### Section D comprises:

- D1-1 bowls with offset neck, and often one cordon.
- D1-2 D1 with exaggerated neck.
- D1-3 D1 with girth groove.
- D1-4 wide-mouthed bowls.
- D1-5 plain necked bowls without true defined offset or cordon.
  
- D2-1 bowl version of B3-1, cordoned.
- D2-2 very large cordoned bowls.
- D2-3 squat bowls with deep vertical neck above globular body, neck cordoned or corrugated.
- D2-4 round bowls with rippled shoulder.
- D2-5 (deep) bowls with cordons around widest part of body.
  
- D3-1 plain round bowls.
- D3-2 globular groove-rimmed bowls.
- D3-3 plain lidded bowls or barrels.
- D3-4 elaborate lidded bowls or barrels.
- D3-5 corrugated conical bowls.
